**Zoho Corporation**

# Notifications

Notifications are alerts that keep you informed about important events related to your RPA account. These notifications can help you stay up to date and address any issues promptly.

Currently, we have one setting you can configure:
**Receive notifications for manual agent updates:** This setting allows you to configure receiving notifications when new agent versions are available.

**To enable this setting:**
The toggle is **turned on** by default. If you want to disable notifications, simply turn off the toggle.

Receive notifications when:
**Manual updates for agents are available** (new versions of RPA agents): If you've configured to manually update the agent version on the machine, you'll receive notifications whenever new versions are available.

> 📄 Note: Only the owner or the user who created the agent will receive notifications about these updates.

Issues with updating the agent in case of auto-update failures will also be listed in this section.
