

Zoho Recruit

What is Zoho Recruit?

Zoho Recruit is an applicant tracking system that helps staffing agencies and recruiting departments track job openings, resumes, candidates, and contacts more quickly and efficiently. You can customize and categorize your modules, set reminders for tasks, and check all activities with a client or a contact in the activity stream.

How to connect your Zoho Recruit account to Zoho Flow

1. Select the trigger or action required. If you select a trigger, click **Next**.
2. If there are no existing Zoho Recruit connections in your account, click **Connect**. Otherwise, click **+New**.
Alternatively, you can create a new connection by navigating to **Settings**, then **Connections**. Click **Create connection** and choose Zoho Recruit.
3. Enter a connection name, then click **Authorize**.
4. Click **Accept** to allow Zoho Flow to access your account.

API documentation

If you experience any Zoho Recruit-related errors in your flows or if you wish to learn more about the Zoho Recruit API, the API documentation can be found [here](#).

How to migrate to the latest version

To ensure a smooth transition to the latest version, we strongly recommend you to follow these steps:

1. Switch off the flows that include Zoho Recruit triggers and actions.

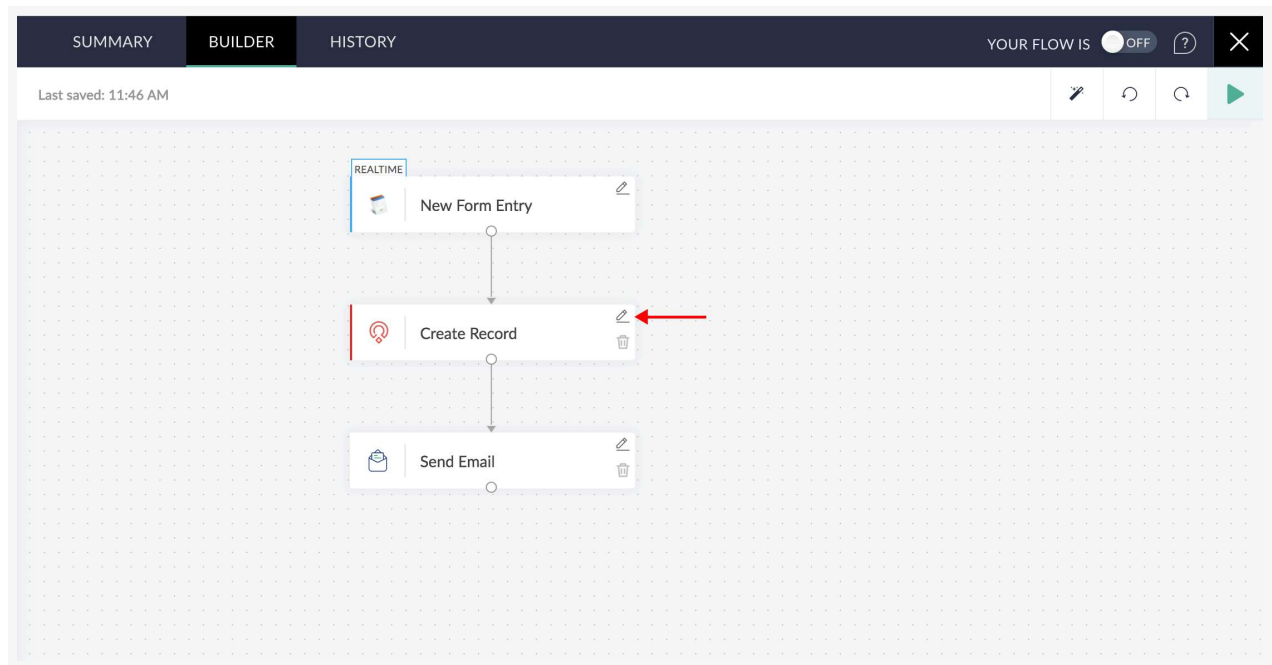

2. Create a copy of the flows by clicking the **Create copy** button. You can use the original flows as a reference in case something goes wrong.

3. Create a new Zoho Recruit connection from **Settings > Connections > Create Connection > Zoho Recruit**.

Note: The new connection will utilize the latest **OAuth V2** authentication scheme. Keep your previous Zoho Recruit connections undisturbed until you've ensured that all your reconfigured triggers and actions that use them are working fine.

4. In the copied flows, reconfigure the Zoho Recruit triggers and actions by clicking the **Edit** button. Use the newly created connection while reconfiguring.

5. Even though most of the data mappings will be unaffected, we strongly recommend that you remove the existing mapping and insert variables to the desired fields again.

Note: Because you are working on a copy of your flow, you can always refer to the original setup to verify if you have mapped the fields correctly.

6. Switch the new flows on.

Triggers and actions available in Zoho Recruit

Triggers

Record created

Triggers when a new record is created

Record updated

Triggers when the details of an existing record are updated

Actions

Add tabular row

Adds a tabular row to the specified record

Create record

Creates a new record

Fetch record

Fetches the details of an existing record

Update record

Updates the details of an existing record
