

Versions

What is versioning in Zoho Flow?

Versions in Zoho Flow help you review and track when a flow was made, and the changes that were made throughout its lifecycle.

How are versions created?

A new version of a live flow will be created each time you click **Apply changes** in the Flow builder. This gives you information about the triggers, actions, or logic elements that are added or removed in your flow. Any unsaved changes in the flow will be available as a **Draft** version, which you can apply to your existing live flow.

How do versions help?

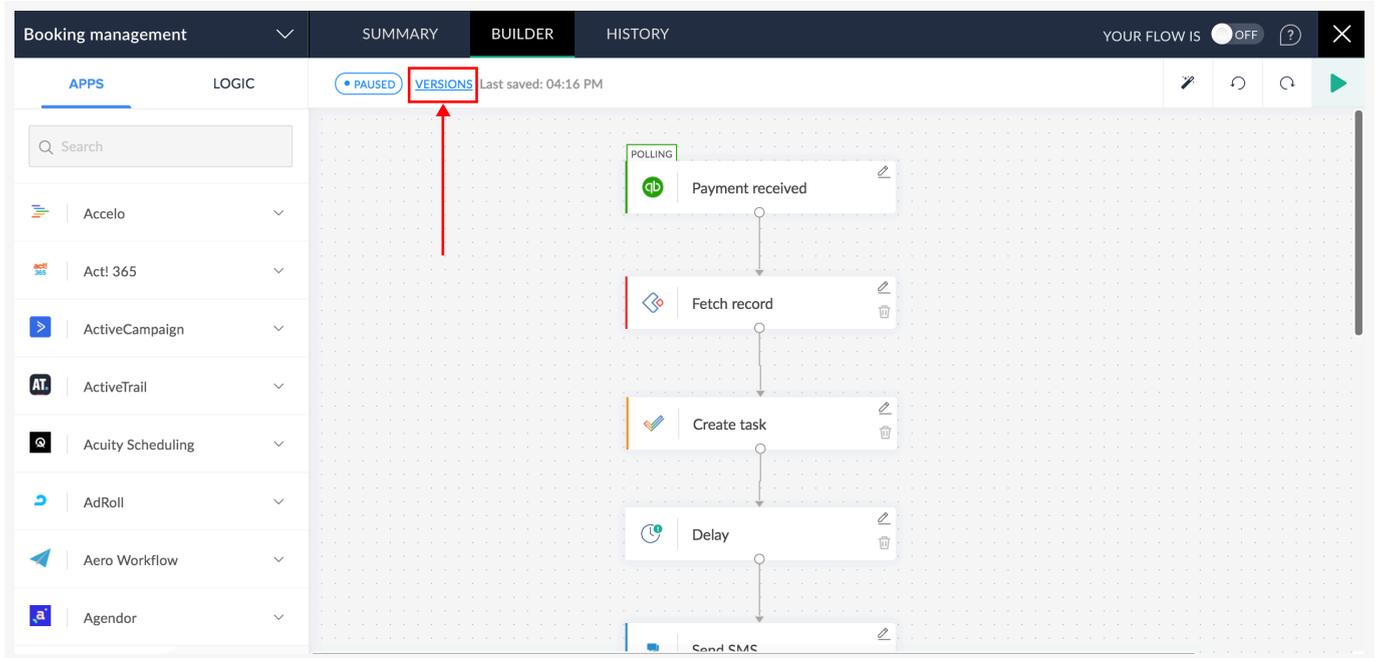

Suppose you have created a simple flow integration, and at a later stage, you wish to modify it with new logic elements or actions. Suppose a user in your organization might want to try a few changes to an already working flow configuration. However, this should not affect the original flow that is working perfectly.

Versions can help you track any changes applied to a flow by creating multiple instances of your integration for you to test, track, and apply new changes. You can also view the date and time the instances were created. Additionally, it also lets you add notes to different versions.

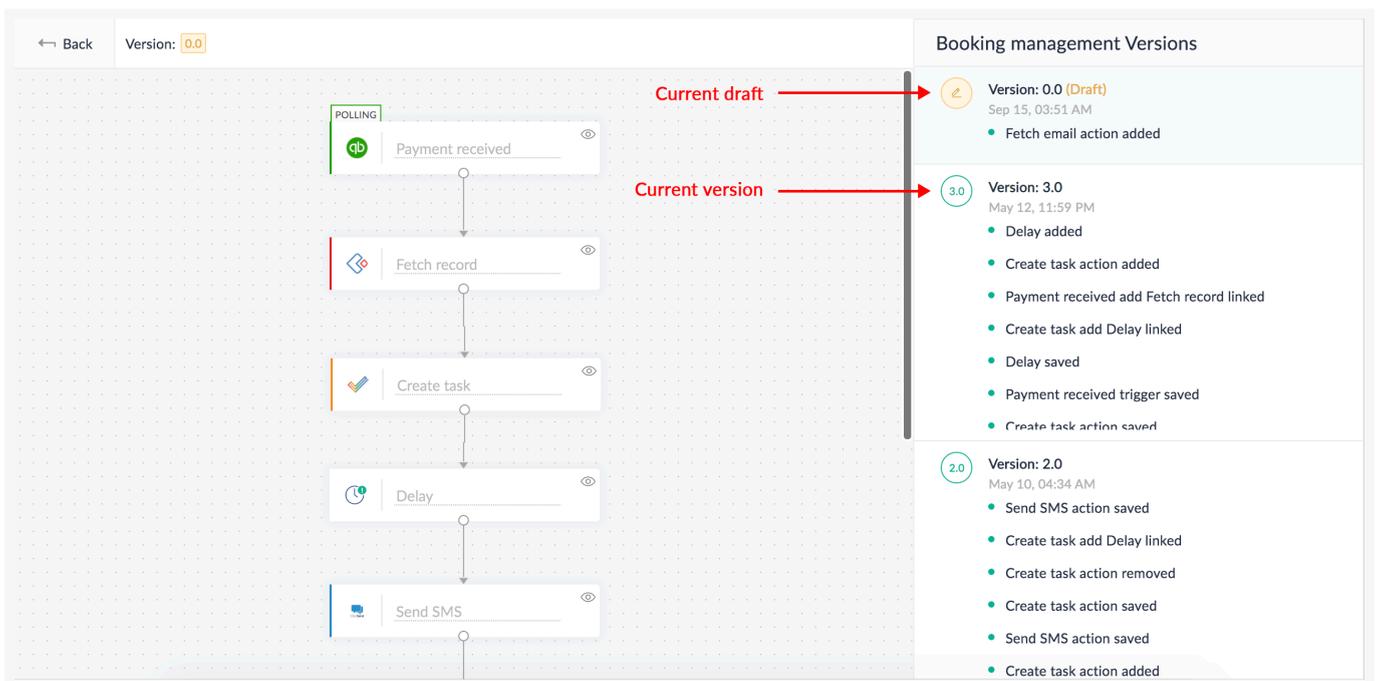

How do I use versions?

To view the different versions of your flow:

1. In your flow's builder page, click **VERSIONS**. All the versions, including the live and the draft ones, will be available under the *Versions* section on the right side of the builder interface.

2. Click on a version to preview it on the builder. You can either **Apply** the draft versions, or you can view the previous versions.

3. In the previous versions, you can click on the **View** button on an action if you want to see how it was configured in that particular version.

← Back Version: 3.0

```
graph TD; A[Payment received] --> B[Fetch record]; B --> C[Create task]; C --> D[Delay]; D --> E[Send SMS];
```

Booking management Versions

- Version: 0.0 (Draft)**
Sep 15, 03:51 AM
 - Fetch email action added
- Version: 3.0**
May 12, 11:59 PM [Add Comment](#)
 - Delay added
 - Create task action added
 - Payment received add Fetch record linked
 - Create task add Delay linked
 - Delay saved
 - Payment received trigger saved
 - Create task action saved
- Version: 2.0**
May 10, 04:34 AM
 - Send SMS action saved
 - Create task add Delay linked
 - Create task action removed
 - Create task action saved
 - Send SMS action saved
 - Create task action added

4. You can also add comments by hovering over a version and clicking the **Add comments** button.
