

Create a new project in PageSense

Your space and projects in PageSense have the option to add new collaborators, and to set user-based permissions for individuals working across different projects in your space (referred as *My Space*).

Note:

- You can only create a space using a single Zoho account. We recommend that you use one space per organization, or one space per team in an organization.
- You can make any space the default working space by clicking the **More** icon, followed by the **Make Default** button on the *Space listing* page.

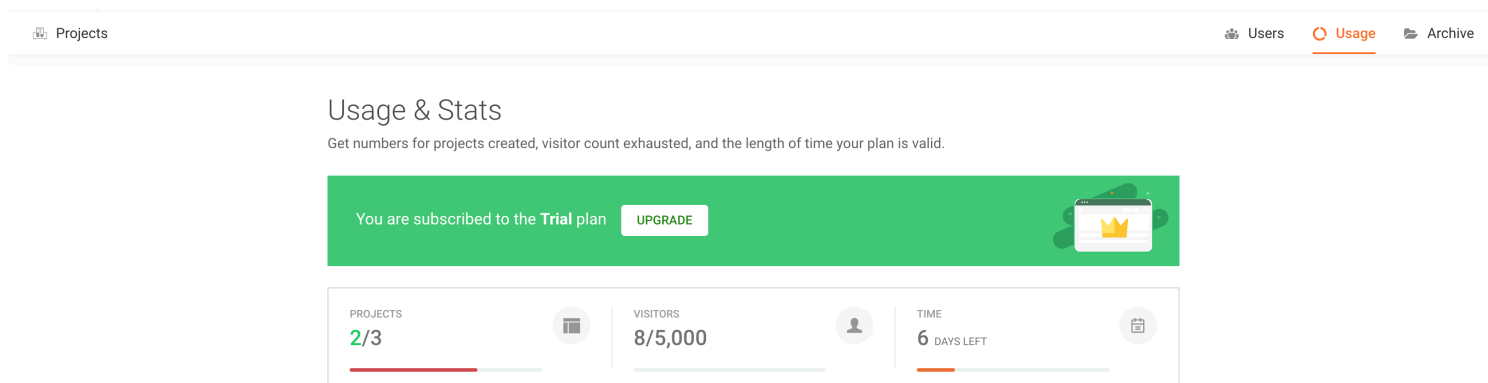

To create a new project within a space

Once you're a part of a space in Zoho PageSense, it's vital to create multiple projects to organize and manage various sets of experiments that target different sections of your business website, multiple sites, or products. This feature also allows you to add multiple collaborators, and provide the right level of permission to people working on the same project to achieve a desired business goal.

 For example, say you have three different websites: *an eCommerce, a health and fitness, and a travel blog* site. In this case, you can create a project for each website, and run multiple experiments to analyze the metrics of different customers within a project.

 The number of Projects you can create is based on your [subscription plan](#).

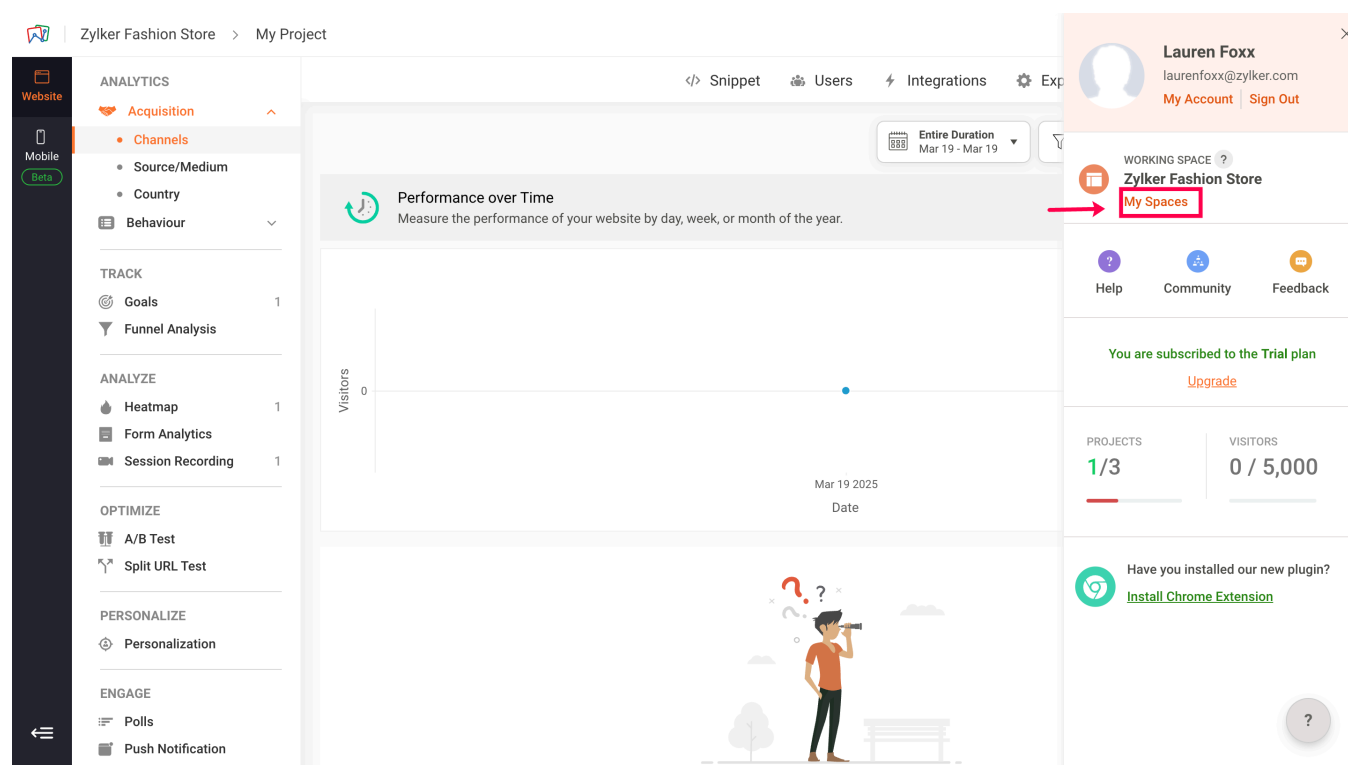

To view your plan and usage details, click the **Usage** tab on the top-right corner.

- ❶ A project contains the data for all the experiments within it, and each of those experiments share the same snippet code. You can create multiple A/B tests, Split URL tests, Heatmap, Form Analytics, and Funnel Analysis experiments in a project.

To create a new project:

1. Click the profile picture icon in the top-right corner, then click the **My Space** button.

2. Choose the **Space** (either **My Space** or **Invited Spaces**) you want to create your new project in. then click the **New Project** button.
