

# Install the PageSense code snippet on Squarespace

[Squarespace](#) is a website building platform that helps you to build creative websites using its amazing drag and drop editor and showcase your work online. This guide helps you with few simple steps to add the PageSense snippet code on your squarespace to connect your websites and start visitor tracking with ease. Once after you add the code, you can use a variety of website testing and optimization tools of PageSense like heatmap, funnel, AB testing, session recordings, etc and even setup business specific goals to track conversions and visitors behavior on different pages of your squarespace sites. Further, PageSense also lets you integrate with traditional website analytics tools like google analytics to study deeper metrics of your site.

## To install Zoho PageSense's code on all the pages of your Squarespace site:

1. Open your Zoho PageSense account on the web browser, click **Snippet** tab on the top bar and click **Copy** to copy the code for your Project.

Integrate with GTM

#### How do I install it?

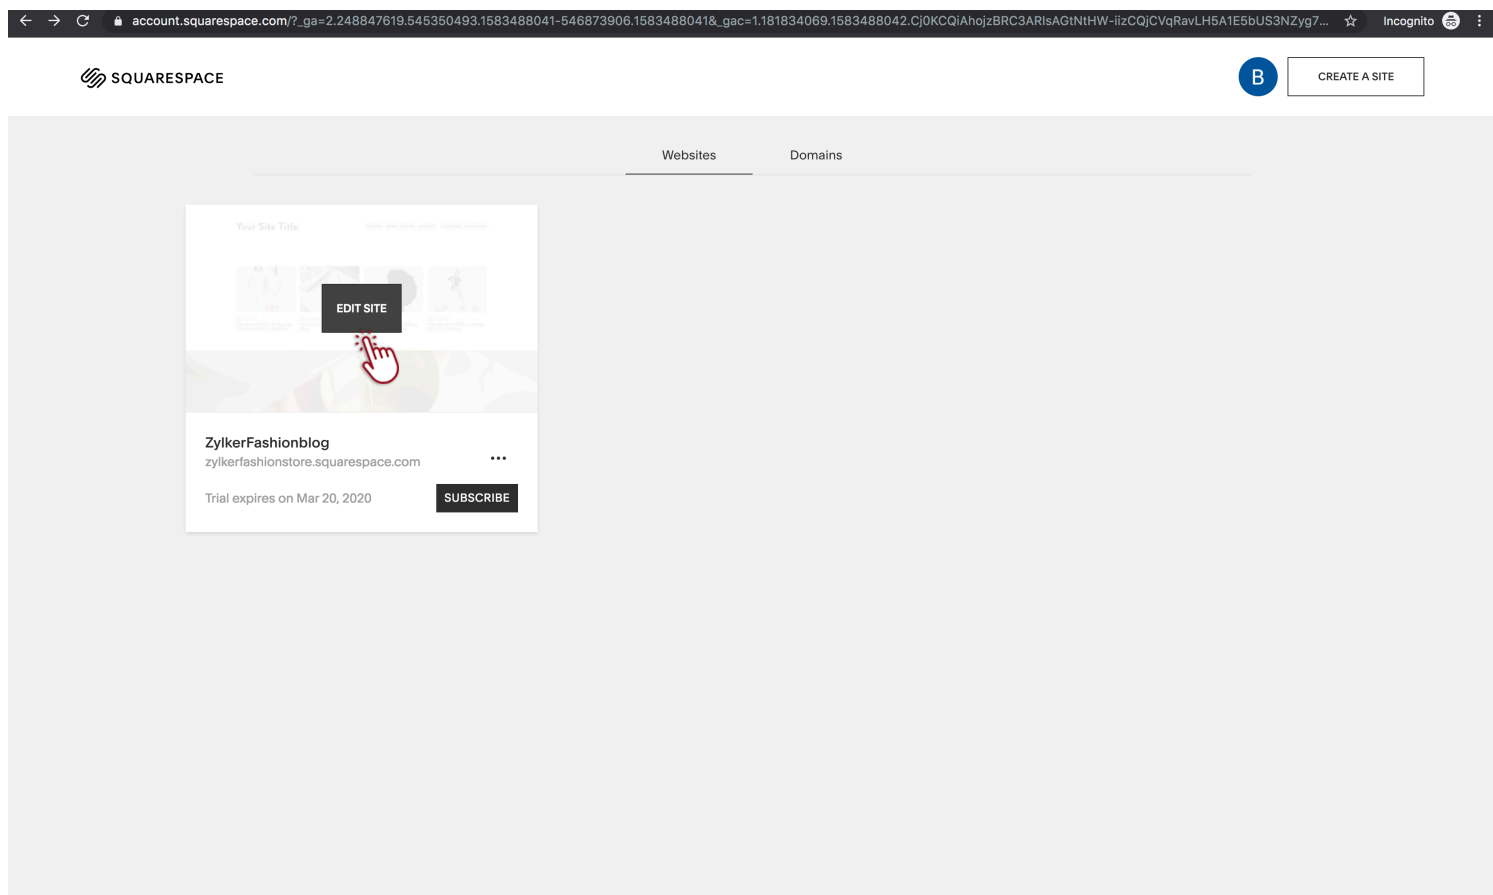

- Paste the snippet at the beginning of the <head> section of your HTML code.
- The snippet must be added to all pages involved in the experiment.
- This is a one-time process. The snippet will automatically update for all experiments in this project.

5. Once your PageSense code snippet is verified on your website, you will be able to create experiments on any page from your site and track visitor metrics in Zoho PageSense.

 **Note:** You can verify if the code snippet is installed on your web page successfully by entering the experiment URL in the *Verify Your URL* section of the **Snippet** page in Zoho PageSense account as shown in the figure below.

The screenshot shows the 'Snippet' page in the Zoho PageSense interface. The page has a navigation bar with 'Experiments' and 'Snippet' (highlighted in red). Below the navigation bar, the 'Snippet' section is titled 'Snippet' with a subtitle 'To track metrics for your entire website, make sure you install the code snippet to all web pages.' There are two tabs: 'Synchronous' (selected) and 'Asynchronous'. The 'Synchronous' tab displays a code snippet: `<script src="https://cdn.pagesense.io/js/tykszw9j/69699e6be2e5410ba2869f405b609b85.js"></script>`. To the right of the code are buttons for 'Send via email' and 'Copy'. Below the code is a link 'Integrate with GTM'. Under the heading 'How do I install it?', there are three bullet points: 'Paste the snippet at the beginning of the <head> section of your HTML code.', 'The snippet must be added to all pages involved in the experiment.', and 'This is a one-time process. The snippet will automatically update for all experiments in this project.' At the bottom, there is a 'URL' section with a text input field containing 'https://zykerfashionstore.zohostore.com/' and a 'Verify' button. A help icon (?) is located in the bottom right corner.
